

212/219

Sub A 6. (twice amended) An inflatable vest for administering CPR to a patient, the patient having a chest, armpits, and a sternum, said sternum having a superior-inferior length and said chest having an anterior surface, the inflatable vest comprising:

F₁ a belt sized to circumferentially fit around the patient and to cover substantially the entire width of the chest between the armpits and to cover substantially the entire superior-inferior length of the sternum, said belt being substantially circumferentially inextensible when fitted around the patient; and

a bladder attached to the belt, said bladder having a width and said bladder comprising:

a bottom-chest panel composed of an inextensible material that is adapted to cover at least substantially the entire portion of the anterior surface of the chest of the patient;

a top-belt panel composed of an inextensible material and sealed to the bottom-chest panel to form a gas tight bladder chamber having an opening to receive compressed gas;

wherein the bottom-chest panel and the top-belt panel form a radially extensible bellows.

Sub H 12. (twice amended) An inflatable vest for administering CPR to a patient, the patient having a chest, armpits, and a sternum, said sternum having a superior-inferior length, the vest comprising:

F₂ a belt sized to circumferentially fit around the patient and to cover substantially the entire width of the chest between the armpits and to cover substantially the entire superior-inferior length of the sternum, said belt being

212/219

substantially circumferentially inelastic when fitted around the patient; and

a bladder, attached to the belt, said bladder having a width, said bladder comprising:

CF
F2
a bottom-chest panel composed of an inelastic material that is adapted to cover at least substantially the entire portion of the top of the chest of the patient; and

a top-belt panel composed of an inelastic material and sealed to said bottom-chest panel to form a gas tight bladder chamber having an opening to receive compressed gas;

wherein the bottom-chest panel and the top-belt panel form a radially inelastically extensible bellows.

SubH 15. (twice amended) An inflatable vest for administering CPR to a patient, the patient having a thorax, the vest comprising:

F3
a belt sized to circumferentially fit around the patient, said belt having a width to cover substantially the entire thorax of the patient, said belt being substantially circumferentially inextensible when fitted around the patient; and

a bladder, attached to the belt, said bladder having a width greater than the width of the belt, said bladder comprising:

a bottom-chest panel composed of an inextensible material that is adapted to cover substantially the entire thorax of the patient;

a top-belt panel composed of an inextensible material and sealed to said bottom-chest panel to form a gas

212/219

CR
F3
tight bladder chamber having an opening to receive compressed gas;

wherein the bottom-chest panel and the top-belt panel form a radially extensible bellows.

Sub A
18. (twice amended) An inflatable vest for administering CPR to a patient, the patient having a chest, armpits, and a sternum, said sternum having a superior-inferior length, said vest comprising:

F4
a belt sized to circumferentially fit around the patient and to cover substantially the entire width of the chest between the armpits and to cover substantially the entire superior-inferior length of the sternum, said belt being substantially circumferentially inextensible when fitted around the patient;

a detachable bladder, detachably attached to the belt, said bladder having a width, said bladder comprising:

a bottom-chest panel composed of an inextensible material that is adapted to cover at least substantially the entire portion of the top of the chest of the patient;

a top-belt panel composed of an inextensible material and sealed to said bottom-chest panel to form a gas tight bladder chamber having an opening to receive compressed gas;

wherein the bottom-chest panel and the top-belt panel form a radially extensible bellows.

F5 Sub H
21. (amended) An inflatable vest for administering CPR to a patient, the patient having a chest, said chest having an anterior surface extending laterally between the patient's armpits and

212/219

superiorly along the superior-inferior length of the patient's sternum, said inflatable vest comprising:

a belt sized to circumferentially fit around the patient's chest and to cover substantially the entire anterior surface of the chest, said belt being substantially circumferentially inextensible when fitted around the patient; and

a bladder attached to the belt so that, when the belt is fitted around the patient's chest, the bladder is disposed between the belt and the patient's chest, said bladder having a width and said bladder comprising:

a bottom panel composed of an inextensible material that is adapted to cover substantially the entire anterior surface of the chest of the patient;

a top panel composed of an inextensible material and sealed to the bottom panel to form the bladder.

23. (amended) The vest of claim 21 wherein the bottom panel and the top panel form a radially extensible bellows.

24. (amended) The vest of claim 22 wherein the bottom panel and the top panel form a radially extensible bellows.

25. (amended) The vest of claim 21, wherein the bottom panel and the top panel are made of nylon fabric double coated with polyurethane.

28. (amended) The vest of claim 24, wherein the bottom panel and the top panel are made of nylon fabric double coated with polyurethane.
